## “Door Buster”

The Arnold Company is proud to introduce our latest in freight car opening units, the “Door Buster”!

**Door  
Demon**<sup>®</sup>

The plug door opener mechanism is designed to open freight car plug doors without the danger of physical stress to the operator. The plug door opener mechanism can be operated from the seat of a fork truck/lift keeping the worker safely away from the stored energy in the plug door.

The winch part of our unit uses two 9500 pound winches to make pulling open and closed even the toughest of freight car doors easy and safe. We use a synthetic rope that will “lay down” if cut instead of the whipping effect of a cable or chain.

This unit uses 2 group 24 batteries with 500 cca (cold cranking amps) each that are used in parallel in a 12-volt system. This is a deep cycle marine battery. You can replace these at any auto parts store. This unit comes with a “Quick Charge” (brand name) 12-volt charger that couples to the unit with a standard connector. The recharge from dead takes about 4 hours. As with all smart chargers, this one will drop to a trickle and go into a maintenance mode when left on for extended periods.
