Fork Mounted Hopper Gate Door Opener

This is our most economical powered door opener but still is as strong as the rest. We use a hydraulic motor to turn the capstan. This unit will tie into your hydraulic system via the utility connectors and is operated by the driver from the seat of the fork-equipped device.

Door Demon[®]

A flow control on this Door Demon[®] will regulate the flow to 4 gallons per minute. Most forklifts operate above our desired flow, so this is usually not a problem.

The shaft length for the "Fork Devil" is totally manufactured to meet your need. We will make it fit on most fork-equipped devices. The fork pockets of this unit are 6 5/8" wide (inside width).
